# Seven Habits for Designing Highly Effective OLAP Solutions

- **Visualize**
- **Design with the end in mind**
- **First things first**
- **Focus on the Customers**
- **Listen first, then execute**
- **Collaborate**
- **Review, Analyze, Iterate**

<b>Establish the Program</b>	<ol style="list-style-type: none"> <li>1. Develop the Rationale</li> <li>2. Target the Opportunities</li> <li>3. Define the Architecture</li> <li>4. Create the DW Program</li> </ol>
<b>Prepare the Project</b>	<ol style="list-style-type: none"> <li>5. Plot the Project Tasks</li> <li>6. Establish the Infrastructure</li> <li>7. Procure the Tool Kit</li> <li>8. Assemble the Team</li> </ol>
<b>Initiate the Database</b>	<ol style="list-style-type: none"> <li>9. Investigate Consumer Needs</li> <li>10. Triage the Source Elements</li> <li>11. Model States and Dimensions</li> <li>12. Design the Database</li> <li>13. Acquire Source Data</li> <li>14. Populate the Database</li> </ol>
<b>Explore the Data</b>	<ol style="list-style-type: none"> <li>15. Iterate Base Table Design</li> <li>16. Explore Consumer Usage Interactively</li> <li>17. Tune Collection Design</li> <li>18. Plan Cycles and Production Migration</li> </ol>
<b>Implement the Deliverables</b>	<ol style="list-style-type: none"> <li>19. Prepare for Release</li> <li>20. Train the Consumers</li> <li>21. Initiate Support Processes</li> <li>22. Migrate to Production</li> </ol>
<b>Expand the Environment</b>	<ol style="list-style-type: none"> <li>23. Manage the DW Inventory</li> <li>24. Synchronize with Evolving Business Needs</li> <li>25. Evangelize Endlessly</li> <li>26. Do it Again!</li> </ol>

✓ **Seven Habits**

✓ **Trivial Pursuit**

✓ **Characteristics of a Good Show**

✓ **Q&A**

# What defines a good show?

- **Actors?**
- **Directors?**
- **Editors?**
- **Producers?**
- **Story?**
- **Setting?**
- **Special Effects?**
- **Budget?**

# Characteristics of a good **OLAP** Show

**OLAP**

- PLOT
- SETTING
- CHARACTERS
- POINT OF VIEW
- SYMBOLISM
- THEME
- STYLE/VOICE

# PLOT

- What *exactly* happens in the presentation?
- Is there revelation, resolution, or both?

If conclusions are drawn, what recommendations made?

# SETTING

- **What is the time period of the presentation?**
- **Does the setting make a difference, or could this story take place anytime, anywhere?**
- **How might a different time period affect the story?**

Design around time.

# CHARACTERS

- **What characters are multi-dimensional/dynamic?**
- **What characters are flat/static? Why?**
- **How is their character revealed (hierarchy, comments, member properties, etc.)?**

Understand how your customers look at dimensions.

## POINT OF VIEW

- **Who tells the story?**
- **What about the narrator makes a difference in the story (participant/nonparticipant, function, character, limitations, etc.)?**

Is there enough depth to satisfy the info consumer?

# SYMBOLISM

- **What are the symbolic elements?**
- **How and why are they used?**

What about icons, color schemes and tag lines?

# THEME

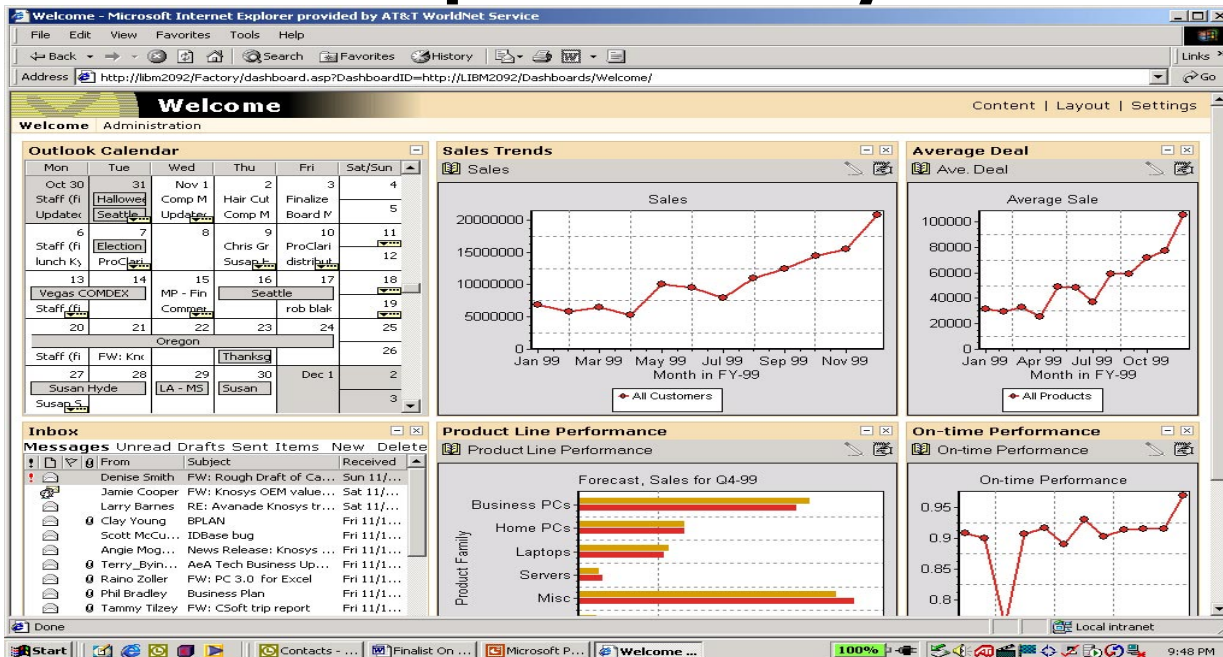

- **What repetitions of words or details do you want people to find?**
- **What does the story say about the business? How loudly? How well?**

To be or not to be subtle???

# STYLE/VOICE

- What presentation tools are you using?
- How does it impact the story?

One size does not fit all!!!

# Back End vs. Front End

# Introduction to SQL Server 2000 Analysis Services

# Agenda

- **Microsoft's Market Perspective and Fit Within Business Intelligence (BI)**
- **Overview of key OLAP & BI concepts**
- **Overview of Analysis Services**
  - Intuitive Design
  - Storage modes & aggregation techniques
  - Use of partitions
  - Data Access

## Vision - BI For Everyone

- **Affordable**
- **Scalable**
- **Fast “Go To Market”**
- **Ubiquitously accessible**
- **Embeddable**
  - Great Plains
  - Manugistics
  - Web Trends
  - Business Objects
  - Cognos
  - etc.

## Solution – BI Tools In The Box

- **Design the data warehouse / data mart**
  - SQL 2000 – Enterprise Manager
  - **Visio 2000 – Enterprise Manager**
- **Populate the data warehouse / data mart**
  - SQL 2000 – Data Transformation Services
- **Create OLAP Cubes**
  - SQL 2000 – Analysis Services
- **Query The Data**
  - SQL 2000 – English Query
  - **Microsoft Office**
    - **Excel & Access**
    - **Office Web Components**

# Agenda

- **Microsoft's Market Perspective and Fit Within Business Intelligence (BI)**
- **Overview of key BI concepts**
- **Overview of Analysis Services**
  - Intuitive Design
  - Storage modes & aggregation techniques
  - Use of partitions
  - Data Access

# OLTP Differs From BI

- **OLTP supports**
  - Streamlining operations
  - Real time production systems
  - Current, changing data
  - Granular – Transactional
- **BI supports**
  - Analyzing Operations / Improving Decision Making
  - Consistent, heterogeneous data
  - Voluminous, historical, stable data
  - Summarized data
- **BI has different design & storage requirements from OLTP**

Operating  
Business

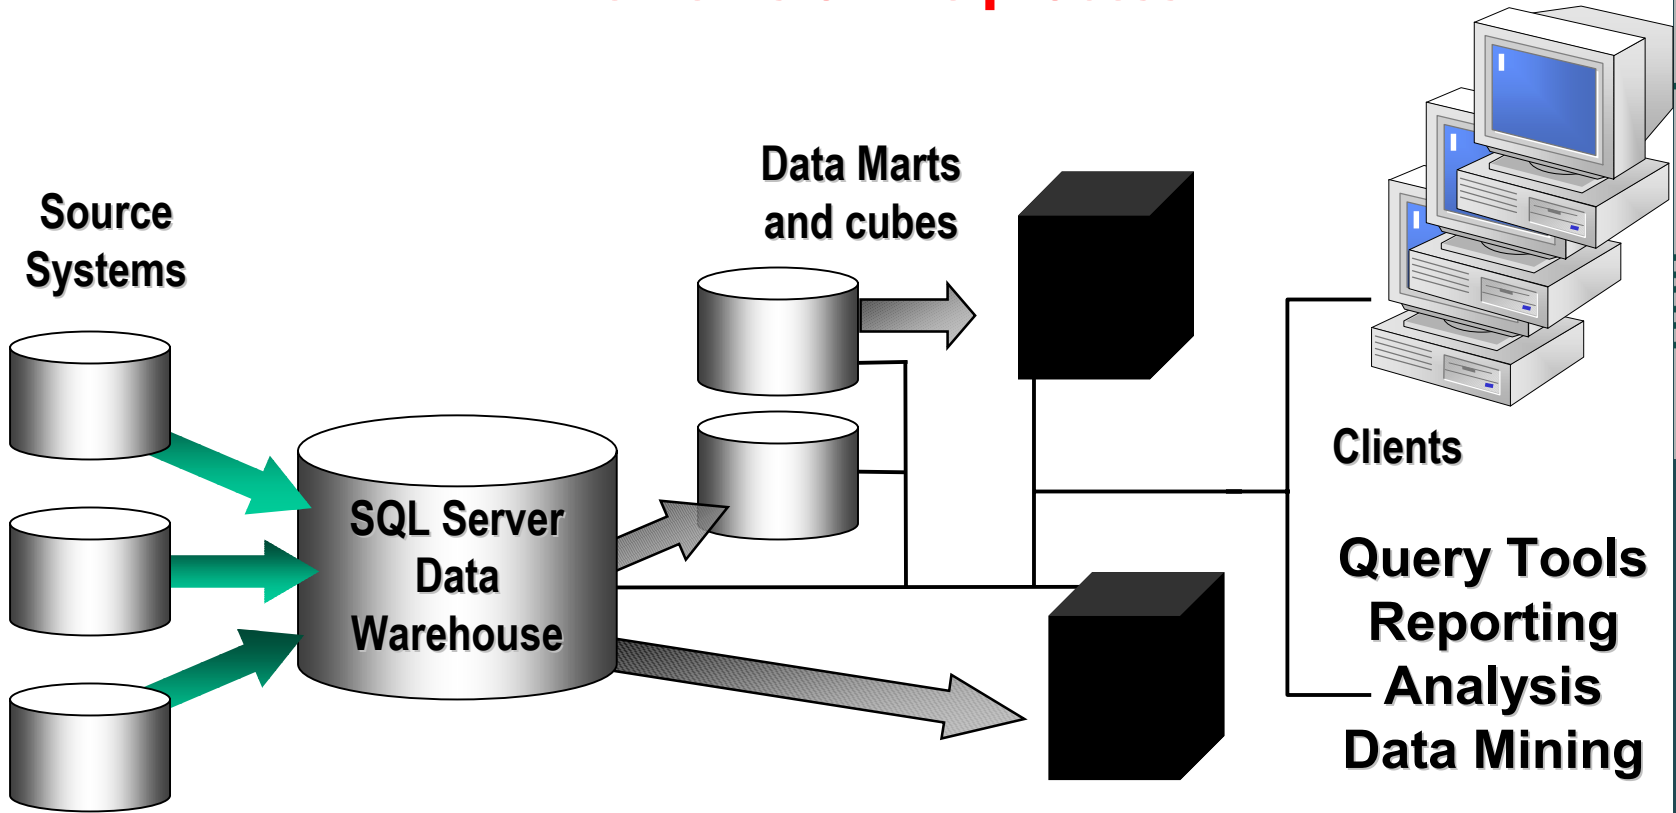

Managing  
Business

# Classical BI Architecture

## Elements of the process

**Design the Data Warehouse**

**Populate Data Warehouse**

**Create OLAP Cubes**

**Query The Data**

# BI Architectural Goals

- **Provide platform to deliver a great user-analyst experience**
  - With data that is consistent, centralized and easily accessible
  - Without getting in the way of OLTP systems
- **Ability to incorporate data from internal or external sources - regardless of format or platform**
- **Agile so that it can adapt to changes in the business**

# BI User Requirements

- **Support decision making – about managing & planning**
  - How/what/when/why/where of a business
  - Facilitate queries without hindering operational systems performance or having to change the design
  - Provide centralized repository of consistent data
  - Answer complex queries quickly
  - Enable data mining to discover new relationships in data
- **Provide different levels of analysis**
  - View data from many perspectives
  - Easily navigate from summary to detail
- **End user acceptance and usage is the true measure of success**

# What is OLAP?

- **OnLine Analytical Processing**

- It's a cool way of cheating that enables you to get queries answered incredibly fast
- OLAP aggregates data (it pre-summarizes data) across all dimensions

Example:

by MO, QTR, YR

by Country, State, City ...

etc...

- Basic argument:  
“Why read through each and every detailed transaction to get an answer when the question can be answered more quickly using summary level data”

## Why Use OLAP With DWHS?

- **OLAP is an enabling technology that supports dynamic analysis**
  - Intuitive multidimensional model
  - Fast response times against huge databases
  - Offers complete syntax for expressing analytical queries and business logic
  - Optimizes the use of network resources as well as Internet/Intranet deployments

# Agenda

- **Microsoft's Market Perspective and Fit Within Business Intelligence (BI)**
- **Overview of key BI concepts**
- **Overview of Analysis Services**
  - Intuitive Design
  - Storage modes & aggregation techniques
  - Use of partitions
  - Data Access

# OLAP – Enabling Analysis

## Data Sources

- **Analysis Services works as well with data coming from Oracle, DB/2 and others as it does with SQL**
- **Analysis Services supports all data sources accessible via ODBC (including flat files)**
- **Analysis Services also supports newer generation OLE-DB data sources**
- **DTS and SQL capable of accepting XML**

# OLAP – Enabling Analysis

## Mapping warehouse to cube

- **Dimension tables used to build OLAP dimensions**
  - Shared dimensions enable analysis to take place across cubes
  - Private dimensions support different hierarchies and aggregation rollups
- **Virtual cubes join two or more physical cubes into one logical cube**
  - Requires one or more shared dimensions

# OLAP – Enabling Analysis

## Dimensional design

- **Dimensional modeling easy to accomplish in Analysis Services**
  - Intuitive design palette enables users to model their data and view the results from the same pane
  - Wizards exist to help guide users through common and complex tasks
- **On-line tutorial exists within product to guide new users through basic and advanced concepts**

# Designing dimensions

**D | A | M | A | N**  
CONSULTING

# OLAP – Enabling Analysis

## Cube design

- **Public / Private Dimensions available**
- **Quantitative columns in fact table become measures**
- **Calculated members support creation of:**
  - Derived entities in a dimension
    - New products or regions
  - Derived measures
    - $\text{Income} = \text{revenue} - \text{expense}$

# Designing Cubes

**D A M A N**  
CONSULTING

# OLAP – Enabling Analysis

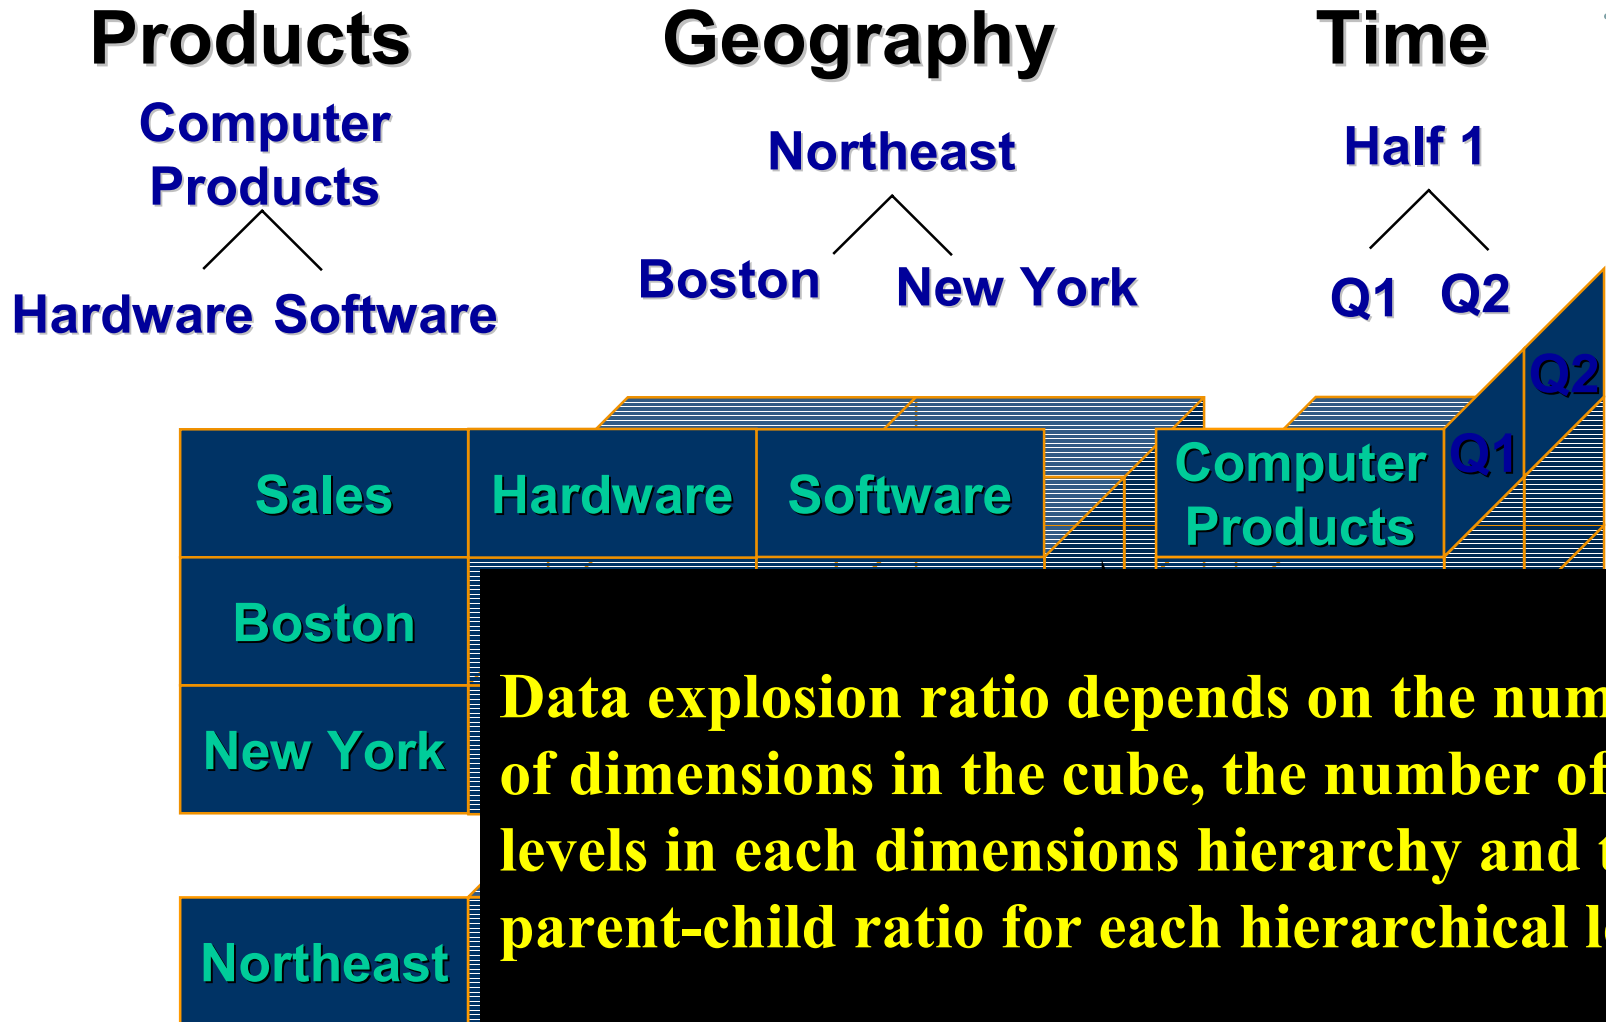

## Flexible Storage

- Debates between MOLAP and ROLAP vendors obscure customer needs
- Analysis Services supports MOLAP, ROLAP, and HOLAP and offers seamless integration of all three
- Users & applications see only cubes

# OLAP – Enabling Analysis

Dealing with data **EXPLOSION!**

**Data explosion ratio depends on the number of dimensions in the cube, the number of levels in each dimensions hierarchy and the parent-child ratio for each hierarchical level**

# OLAP – Enabling Analysis

Dealing with data **EXPLOSION!**

## Persist only base aggregates

- **Min**
- **Max**
- **Sum**
- **Count**
- **Distinct Count**

**\* other, more complex aggregates are derived from base aggregates**

# OLAP – Enabling Analysis

Dealing with data **EXPLOSION!**

**Automagically eliminate all sparse data from the cube**

	Furnaces	Air Cond.	HVAC Products
Phoenix	/	150	250
Anchorage	250	/	350
USA	350	250	600

# OLAP – Enabling Analysis

Dealing with data **EXPLOSION!**

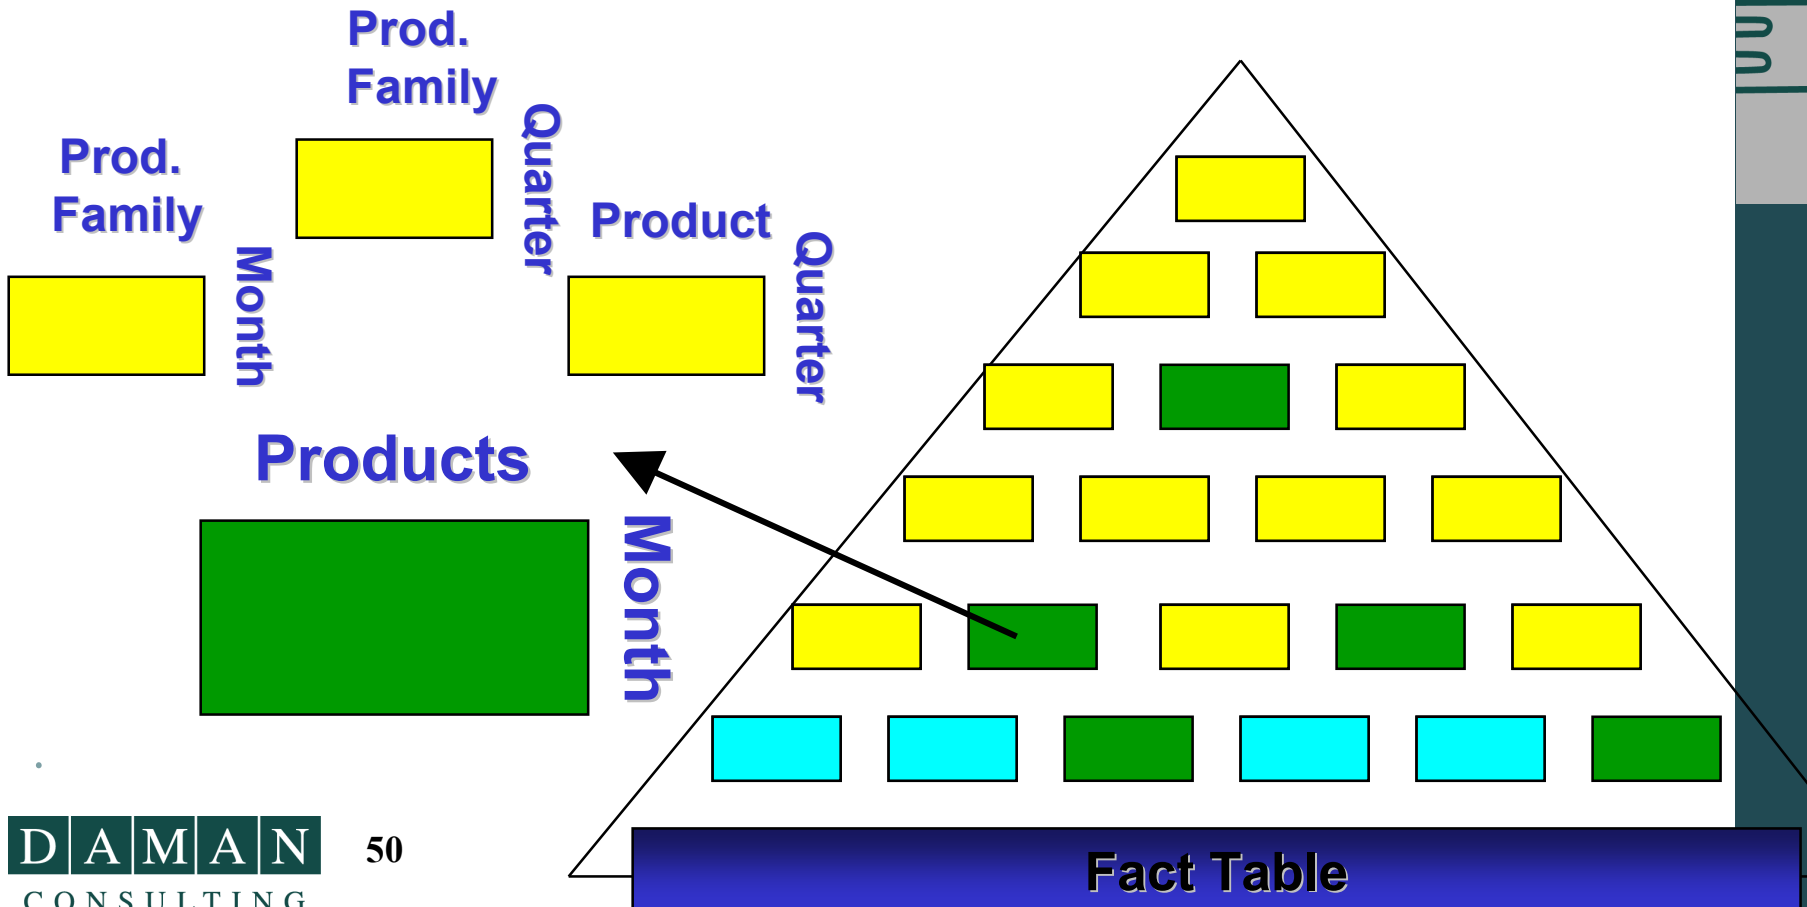

**Do only partial pre-aggregation**

# OLAP – Enabling Analysis

Dealing with data **EXPLOSION!**

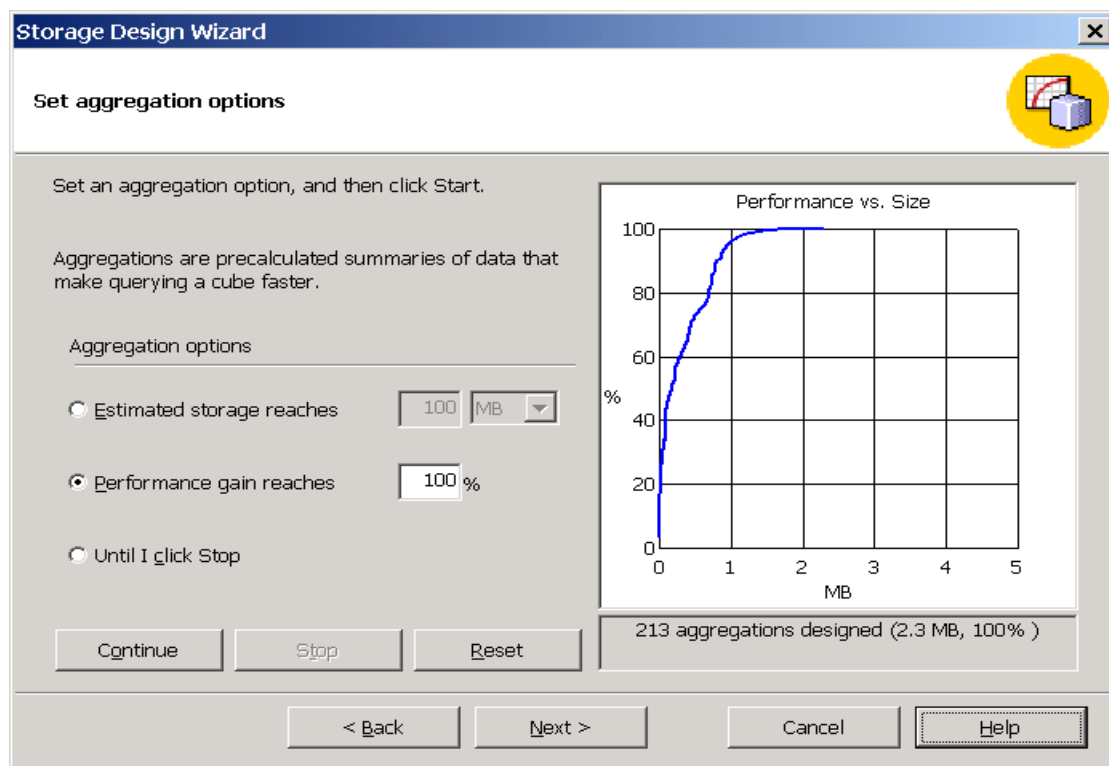

**Do only partial pre-aggregation**

# OLAP – Enabling Analysis

## Dealing with data EXPLOSION!

- **Storage Design wizard finds the “80-20” rule in the data**
  - The 20 percent of all possible pre-aggregations that provide 80 percent of the performance gain
  - Analyses the level counts for each dimensions as well as the parent-child ratios for each level

# OLAP – Enabling Analysis

Dealing with data **EXPLOSION!**

## Final Cube Compression

**When using either MOLAP or HOLAP storage modes, Analysis Services is capable of compressing the final cube size**

# Redefining OLAP Scalability

**T<sup>3</sup> (pronounced T-Cubed)**

## Goal:

- **Demonstrate the scalability of Analysis Services**
  - Build cube from 1TB+ of source data
  - Describe the techniques used to operate at that scale
- **Use the cube to demonstrate high speed queries**
- **Proof-of-concept system**

**Address real business issues:  
schema, data, goals**

Results audited by Winter Corp.

see <http://www.microsoft.com/SQL/techinfo/terabytecube.htm>

# T<sup>3</sup> Storage Requirements

## Table storage (relational)

## Cube storage

Table	Million Rows	GBytes	Cubes	GBytes
detail_brand_*	1,030	163.4	Week_Brand	17.8
detail_prodmod_*	20	3.2	Week_Class	0.2
detail_subcat_*	11	1.7	Week_Subgroup	0.0
detail_upc_*	4,881	793.8	Week_Item	434.7
month_brand_*	295	47.1	Month_Brand	4.9
month_prodmod_*	5	0.8	Month_Class	0.1
month_subcat_*	3	0.4	Month_Subgroup	0.0
month_upc_*	1,429	225.3	Month_Item	24.5
<i>Total</i>	7,674	1,236	Market Research	482
	<b>7.7 Billion</b>	<b>1.2 TB</b>		<b>471 GB</b>

**39%**

# T<sup>3</sup> Performance

- **Processing**
  - 7.7 billion rows, 50 hours
  - 153 million rows/hr
  - 42K rows/sec
  - 60-70% CPU utilization
- **Querying**
  - 50-user workload, 1350 queries, 30-sec think time
  - Cold cache
  - Median response 0.08 sec, mean 1.2 sec
  - Low CPU load - didn't have enough queries running simultaneously!

# OLAP – Enabling Analysis

## Importance of Partitions

- **Central to Analysis Services**
- **Data Management**
  - Incremental updates
  - Adding/dropping time periods
  - Granular control over aggregation design
  - Enable hybrid cube design (e.g. combination of MOLAP and ROLAP partitions in the same logical cube)
- **Basis for advanced features like Write-back**
- **Important scalability & performance implications**
  - Single server parallelism (partition processing)
  - Multi-server parallel processing
  - More efficient query processing

# OLAP – Enabling Analysis

## Efficient Network Utilization

### Client Features

- multidimensional calc engine
- data & metadata caching (session)
- query management
- client OLEDB for OLAP interfaces

### Server Features

- multidimensional calc engine
- data & metadata caching (multi-user)
- query management
- server DSO admin interfaces
- security
- data refresh
- aggregation management

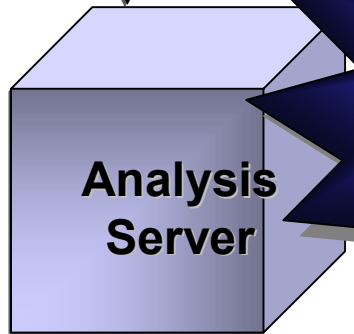

# OLAP – Enabling Analysis

## Cooperative Caching

Query 1) Show me Jan'00, Feb'00, and March'00 Sales

Query 2) Show me Q1'00 Sales

Query 3) Show me Q1'00 & Q1'99 Sales

# Office & Office Web Components

**DAMAN**  
CONSULTING

## Features we didn't have time to cover ...

- **Member properties & virtual dimensions (same as attributes in other products)**
- **Write-back & drill through**
- **Virtual cubes**
- **Data Mining**
- **Actions**
- **Custom rollups**
- **Calculated cells**
- **Dimension architecture**
- **Usage based optimization**

# Solve Prickly OLAP Problems That Plague Other Vendors

- **Cube explosion – not uncommon to experience exponential data explosion**
- **Time needed to reprocess/refresh cube(s)**
- **Confusion over storage options (MOLAP, ROLAP, HOLAP)**
- **Inability to handle really complex calculations**
- **Cost prohibitive to roll out across enterprise**

**Analysis Services effectively solves  
all these problems**

# OLAP Advantages In Summary

<b>Intelligent Aggregations</b>	<ul style="list-style-type: none"> <li>◆ Significantly smaller databases</li> <li>◆ Faster initial and incremental processing</li> </ul>
<b>Flexible Storage Architecture</b>	<ul style="list-style-type: none"> <li>◆ Supports MOLAP, ROLAP, and HOLAP equally well</li> <li>◆ Application requirements determine storage, not vendor</li> </ul>
<b>Ease-of-Use Ease-of-Mgmt</b>	<ul style="list-style-type: none"> <li>◆ Fast “To Market” Solutions</li> <li>◆ Lower TCO</li> <li>◆ Broad accessibility to data</li> </ul>
<b>PivotTable Service</b>	<ul style="list-style-type: none"> <li>◆ Client-side cache -- improved performance / efficiency</li> <li>◆ Mobile/Disconnected analytical support</li> <li>◆ Web enabled access</li> </ul>
<b>Integration</b>	<ul style="list-style-type: none"> <li>◆ Office, SQL Server, .Net Servers, 3<sup>rd</sup> Parties</li> <li>◆ Compelling bridge between Excel and SQL Server</li> <li>◆ End-to-End data storage, transformation, and analysis</li> </ul>
